

## ALUMINIUM

# Hydro CIRCAL 75R

### SAPA's circular aluminium

Recycled aluminum drastically reduces energy use in the production phase without compromising on quality. SAPA's facades, roofs, windows and doors are circular products manufactured in Hydro CIRCAL 75R.

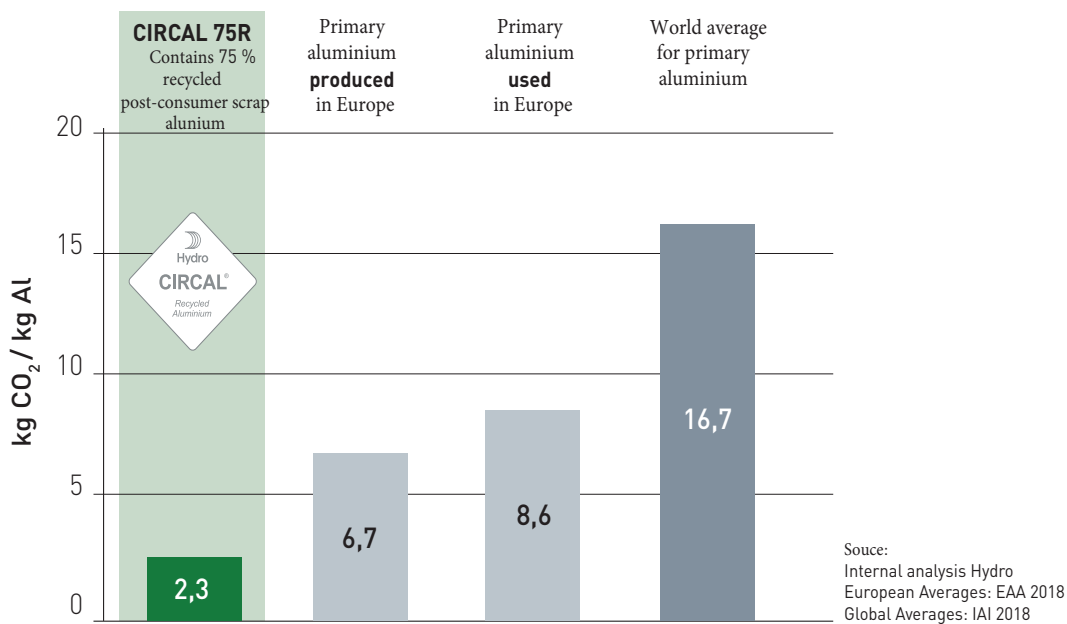

### Hydro CIRCAL

Hydro CIRCAL 75R is a high-quality aluminum made from recycled aluminum from previously end-of-life products (consumer scrap). It can be about facades or windows that have been dismantled from buildings and thus completely recycled.

Hydro CIRCAL 75R contains at least 75% recycled aluminum from end-of-life products and has one of the lowest carbon footprints on the market: 2.3 kg of carbon dioxide emissions per kilogram of aluminum. This is about 4 times lower than the European average for primary aluminium.

### Carbon footprint of aluminium

#### Wha does your choice of aluminium products mean for the enviroment?

The higher the proportion of recycled aluminum from end-of-life products - the lower the carbon footprint and environmental impact.
